PROFESSIONAL OVERVIEW

Security+ certified cybersecurity professional and startup founder with experience developing and deploying commercial AI mobile applications. Hands-on expertise in threat detection, attack simulation, incident investigation, and security monitoring. Strong background in Python, Java, Linux, and security analysis with a passion for protecting systems and identifying threats.

EDUCATION

Bachelor of Science in Computer Science | University of Georgia — December 2025

- Minor: Cognitive Science | Certificates: Cybersecurity & Privacy, Data Science
- Relevant Coursework: Networks, Operating Systems, Cybersecurity, Computer Forensics, Cryptology, Data Security & Privacy

SKILLS

Security: SIEM, Detecting Engineering, Threat Hunting, Incident Response, Digital Forensics, Security Monitoring
Tools: Elastic Security, Kibana, Fleet, Wireshark, Autopsy, Sleuth Kit, Volatility, Chronicle, Docker, Git
Programming: Python, Java, SQL, C, JavaScript
Cloud & Platforms: AWS (IAM, EC2, S3), Linux, Windows, macOS
Networking: TCP/IP, DNS, SSH, HTTP/S, ICMP, Packet Analysis, Firewalls

WORK EXPERIENCE

CO-FOUNDER & SOFTWARE DEVELOPER | TrackMacros — DEC 2025 – PRESENT

- Founded and launched an AI-powered nutrition tracking application available on iOS and Android.
- Led end-to-end product development, including application architecture, AI-powered meal recognition, user experience design, and deployment.
- Acquired 130+ users through public app store releases and ongoing product iteration.

SOFTWARE DEVELOPER | BeyondFech — MAY 2022 – AUG 2023

- Developed a Java/Selenium automation framework that reduced manual regression testing effort by approx 70%.
- Implemented automated testing workflow using Selenium WebDriver and TestNG.
- Built OCR-based data extraction templates using Tesseract OCR.
- Wrote and optimized SQL queries for application data validation and retrieval.

PROJECTS

Elastic SIEM Detection Engineering Lab

- Built an Elastic Security lab using Elasticsearch, Kibana, Fleet, and Elastic Agents.
- Simulated brute-force attacks, persistence techniques, and privilege escalation scenarios.
- Developed custom EQL/KQL detections to identify and investigate security events using real telemetry

USB Forensics Investigation

- Conducted forensic analysis using Autopty/Sleuth Kit, and recovered metadata and artifacts from USB evidence.
- Reconstructed user activity timelines and documented investigative findings

CERTIFICATIONS

CompTIA Security+ — November 2025
Google Cybersecurity Professional Certificate — November 2024
